

JUPITER BAUDOT

985 788 5503 | jupiterbaudot@gmail.com | linkedin.com/in/jupiterbaudot

SKILLS:

Programming Languages: JavaScript, HTML5, CSS3

Frameworks & Libraries: ReactJS, TypeScript, Next.js, Node.js, Tailwind, Redux, GraphQL, Drizzle ORM, Anthropic SDK, Ruby, Rails

Database Management: PostgreSQL, MongoDB, MySQL, Firebase

AI Tools: Cursor, Claude, GitHub Copilot, n8n

WORK EXPERIENCE:

JLP TECH Consulting

Full Stack Engineer | Product Developer | March 2023 – Present

- Shipped 3+ full-stack SaaS products (Next.js, Supabase, Stripe) from concept to production, owning auth, role-based access, admin workflows, and payments end-to-end.
- Architected front-end systems and database schemas across multiple React/Next.js products, including a dental CE marketplace with 60+ live class listings.
- Built multi-environment pipelines with Stripe webhook handling and Playwright E2E test suites, achieving staging-to-production parity across 3+ live applications.
- Leveraged agentic AI tooling (Claude Code CLI, Claude.ai) as a force multiplier across schema design and component architecture, compressing solo build cycles by 40%+.
- Established per-project engineering conventions and AI-assisted handoff systems, reducing architectural drift and ramp time across parallel workstreams.

Fox Corporation

UI / UX developer | May 2022 – Present

- Engineered the front-end interface for Fox's on-demand media management platform, improving usability for over 6,000 users and supporting over 7 million asset formats.
- Developed and deployed asset sharing and networking UI features for international affiliates, resolving multi-browser compatibility issues across Chrome, Safari, Firefox, and mobile devices, resulting in a 100% increase in accessibility.
- Integrated React Hooks and Context API to streamline global state management, reducing prop drilling and improving maintainability and team onboarding efficiency by 30%.
- Refactored legacy front-end codebase, eliminating duplication and improving load performance by 20%, resulting in a more responsive user experience across all platforms.
- Standardized front-end architecture using modular components and best practices, contributing to a long-term 40% reduction in technical debt.

WebMD

Front End developer | Feb 2020 – May 2022

- Built and deployed MERN-based tools for WebMD & Demandforce, launching key patient-facing scheduling features that increased booking efficiency by 30%.
- Engineered Redux and React Hooks architecture to streamline API data flow, improving component load times by 25% and reducing prop drilling across the app.
- Created 40+ reusable UI components for the internal design system, cutting frontend development time on new features by 35%.
- Built interactive data visualization components using React, surfacing patient scheduling trends for internal clinical teams.
- Implemented SEO improvements that boosted organic traffic by 18% within three months.
- Integrated Google Analytics and custom event tracking to uncover user drop-off points, leading to a 20% increase in page completion rates after optimization.

Tech Hire

Full Stack Web developer | May 2018 – Feb 2020

- Led full-stack development of internal MERN-based apps using MongoDB, Express, React, and Node.js, delivering each product to MVP in under 8 weeks.
- Product managed open-source apps tailored for early-career devs; grew contributor base by 40% and streamlined onboarding with clear Git workflows.
- Built & maintained databases using Node.js and MongoDB, scripting data scrapes and models to populate MVP features.
- Mentored 50+ aspiring developers in JavaScript, React, jQuery, Express, SQL, and frontend fundamentals; hosted weekly code reviews and live debugging sessions.
- Hold meetups and career prep for entry level coders.

Speaker

Full Stack Web Developer | March 2016 - May 2018

- Built a React-powered web app to streamline marketer-influencer collaborations, engineering a dynamic group selection system and smart cart creation flow that improved onboarding efficiency by 40%.
- Leveraged Haml and Bootstrap to deliver a responsive, mobile-optimized UI, and used Rails to integrate APIs from legacy systems, Twitter, and Instagram, enabling real-time social data aggregation.
- Managed backend services with PostgreSQL, implemented user validation via Devise and Regex, and extended app interactivity by customizing jQuery logic with Common.js.
- Developed a robust JavaScript WYSIWYG editor, improving content creation UX and reducing time-to-publish by 30%.
- Architected a React-on-Rails platform connecting users with Chinese manufacturers, while optimizing SEO through structured metadata and sitemap strategies.
- Oversaw QA testing for code quality, and modeled/scraped datasets to seed and enrich the PostgreSQL database.

EDUCATION:

Louisiana State University

Bachelor of Computer Science
